

COS 106 – Introduction to Web Technologies

Practical Term Project Submission

Student Information

Student Name	Christopher James
Matriculation Number	2025/B/CSC/0733
Student ID	301855474
Department	Computer Science
Submission Date	June 2026

1. Project Overview

This submission presents a fully responsive, multi-page academic portfolio website built for COS 106: Introduction to Web Technologies. The site serves as a personal academic portfolio showcasing profile, technical skills, academic achievements, production-grade projects, and an interactive academic planner with full CRUD functionality.

Design Philosophy:

Dark aesthetic inspired by modern developer portfolios; security-first messaging; professional typography using Inter font; performance-optimized with CSS Grid, Flexbox, and hardware-accelerated animations; accessibility-conscious with semantic HTML and ARIA labels.

2. Live Demo & Source Code

GitHub Pages: <https://russiantech.github.io/chris-james>

Vercel Mirror: <https://chris-james.vercel.app/>

GitHub Repository: <https://github.com/russiantech/chris-james>

3. Pages Implemented & Features

Page	COS 106 Requirements	Key Features Implemented
Homepage (index.html)	Student name, photo,	Hero section, animated stats

	welcome message, navigation, brief bio	counter, certification preview, project preview
About Me (about.html)	Education, career aspirations, technical skills, hobbies	Interactive timeline, skill tags, aspiration cards, AWS credential showcase
Projects (projects.html)	3+ sample projects with descriptions, images, links	6 production projects with feature lists, tech stacks, live links, role descriptions
Academic Planner (academic.html)	Interactive planner: add, complete, delete tasks	Full CRUD with localStorage, filtering, real-time statistics, course progress cards

4. Technical Implementation

4.1 HTML

Semantic HTML5 elements (header, nav, main, section, article, footer, aside); forms with proper labels and accessibility; tables for structured data; descriptive alt text on images; external links with target="_blank" and rel="noopener"; ordered/unordered lists.

4.2 CSS

External stylesheet (35KB, 900+ lines); responsive mobile-first design (breakpoints: 480px, 768px); CSS Grid for projects, welcome, semester, stats, and aspirations grids; Flexbox for navigation, cards, task items, footer, contact layout; active navigation states, mobile hamburger menu, backdrop blur; hover effects, scroll reveal animations, counter animations; CSS custom properties for design system consistency.

4.3 JavaScript

Event handling (click, submit, blur, input, scroll); DOM manipulation for dynamic task rendering and form states; real-time form validation (email regex, phone digit check); dynamic content updates for task lists, statistics, and filters; arrays and functions for task storage, filtering, and map/reduce statistics; interactive task management with localStorage persistence.

5. Project Screenshots

5.1 Homepage

The homepage features a hero section with animated stats counter, certification preview, and featured project cards.

Christopher James

BSc Computer Science • Miva Open University
Fullstack Software/AI Engineering • Hacking.

Welcome

EMPOWERING PEOPLE & POWERING BUSINESSES

Design Principles

Every solution is built to be **Rapid**, **Responsive**, and **Reliable**—delivering fast development, seamless user experiences across all devices, and dependable systems that scale with confidence.

Academic Excellence

Pursuing BSc Computer Science at Miva Open University, combining rigorous theoretical foundations with hands-on industry experience.

Production Experience

6+ years shipping real-world platforms across e-commerce, ed-tech, fintech, and vertical SaaS for the Nigerian market.

CREDENTIALS

Recent Certifications

MIVA-COS 111 Micro-Credentials — AWS Training & Certification

Technical Essentials

Core cloud Infrastructure: EC2, S3, VPC, IAM. Foundation for secure, scalable architecture.

June 26, 2026

ML Engineer Associate

End-to-end ML lifecycle: supervised, unsupervised, reinforcement learning, SageMaker deployment.

June 28, 2026

Generative AI Fundamentals

Foundation models, prompt engineering, RAG, responsible AI deployment, bias mitigation.

ABOUT ME

Empower people • Power businesses

Elite fullstack python software engineer, with special interest in artificial intelligence, data and hacking.

Christopher James

Fullstack Software Engineer • AI & Data Integration • Hacking Enthusiast

I have 6+ years of production experience building scalable web platforms, SaaS products, and AI-integrated systems. Currently pursuing a BSc in Computer Science at Miva Open University, I operate at the intersection of software engineering, artificial intelligence, and cybersecurity.

My philosophy is simple: **security is not an afterthought—it is the foundation.** Every system I architect is designed with defense-in-depth principles, from IAM policy enforcement and VPC segmentation to continuous penetration testing and secure CI/CD pipelines. I believe that to build truly intelligent software, one must first understand how to protect it.

UNIVERSITY

Miva Open University

EDUCATION

Academic & Professional Training

Present — 2026

BSc Computer Science

Miva Open University, Nigeria

Currently in 100L, 2nd Semester. Focusing on algorithms, data structures, web technologies, and systems security. Active participant in the Micro-Credential Program, earning industry-recognized certifications alongside academic coursework.

2023 — 2024

Professional Certification, Fullstack Development

ALX Software Engineering Program, Nairobi (Remote)

Intensive 12-month program covering software engineering fundamentals, system design, DevOps, and collaborative development. Built production-grade applications using Python, JavaScript, and modern frameworks.

2019

Certification, Software Programming

Dunis Technologies, Lagos

Foundational training in Python and JavaScript, sparking the transition from digital marketing to software engineering.

VISION

Career Aspirations

AI Engineering

Build and deploy custom machine learning models that solve real-world problems—from predictive analytics for African SMEs to computer vision systems for agricultural optimization. I aim to move beyond API integration to training and fine-tuning models from scratch.

Cybersecurity & Ethical Hacking

Attain professional certifications in offensive security (CEH, OSCP) and build secure-by-design systems. My goal is to lead red-team operations and secure architecture reviews for fintech and government platforms across West Africa.

Systems Architecture

Design distributed systems that scale from thousands to millions of users. Master cloud-native patterns, event-driven architecture, and data mesh strategies to power the next generation of African tech infrastructure.

Tech for Social Impact

Leverage engineering skills to build platforms that improve education access, financial inclusion, and healthcare delivery in underserved communities. Technology should be a force multiplier for human potential.

5.5 Projects Portfolio

The Projects page showcases six production-grade applications: Salesnet (AI marketplace), Intellect (digital learning), Stitch (laundry SaaS), Score App (academic management), Inventory Management System, and Techa (personal portfolio).

PORTFOLIO

Featured Projects

Production-grade platforms built across e-commerce, ed-tech, fintech, and vertical SaaS.

Salesnet

Founder & Lead Engineer

An AI-powered, Lagos-first marketplace designed to digitize informal commerce. Features include free vendor storefronts, AI-driven local pricing and product tagging, AR try-on for wearables, geo-location-based vendor recommendations, and embedded fintech for seamless payments. Built to serve the unique logistics and trust challenges of the Nigerian market.

Key Features

- AI-powered product categorization and dynamic pricing
- Augmented reality try-on for fashion and accessories
- Geo-location vendor discovery and route optimization
- Embedded payment processing and escrow services
- Vendor analytics dashboard with real-time sales insights

React FastAPI PostgreSQL AI/ML AR.js Redis

Intellect

Founder & Lead Engineer

A digital learning companion built to democratize education access. Supports video, PDF, PPT, audio, and interactive lesson formats. Integrates an AI Learning Assistant for personalized tutoring, auto-generates completion certificates, hosts live sessions, and provides a Creator Studio for educators to monetize content. Includes B2B partnership tools for institutions and corporate training programs.

Key Features

- Multi-format content delivery (video, audio, documents, interactive)
- AI-powered learning assistant with contextual Q&A
- Auto-certificate generation upon course completion
- Live streaming and real-time collaboration tools
- Creator Studio with monetization and analytics

React Node.js MongoDB LLM Integration WebRTC AWS S3

Figure 5: Projects – Six Production-Grade Applications with Screenshots & Tech Stacks

6. Recent Certifications (MIVA-COS 111)

Completed as part of MIVA-COS 111: Technical Certification in Computing I (Micro-Credential Program):

Certification	Completion Date	Skills Gained
AWS Technical Essentials	June 26, 2026	EC2, S3, VPC, IAM, cloud security fundamentals
AWS ML Engineer Associate Curriculum Overview	June 28, 2026	Supervised/Unsupervised/Reinforcement Learning, SageMaker, feature engineering
Fundamentals of Generative AI	June 28, 2026	Foundation models, prompt engineering, RAG, fine-tuning, responsible AI

7. Career Orientation

Fullstack Software Engineer | AI & Data Integration | Ethical Hacking

I operate at the intersection of software engineering, artificial intelligence, and cybersecurity.

Core philosophy:

Security is not an afterthought—it is the foundation. Career trajectory includes AI engineering for African SMEs, security & ethical hacking, architecture for distributed systems, and tech for social impact in education, finance, and healthcare.

8. Academic Integrity Declaration

I, Christopher James, hereby declare that this project is entirely my own original work. All code, design, and content were created independently for the COS 106: Introduction to Web Technologies term project.

I have not copied, shared, or submitted another student's work. Any external resources used (Font Awesome icons, Google Fonts, CSS documentation) are properly attributed and used within fair academic use guidelines.
